

ECOFLOW SUCCESS AT

Duke Health Care Center: Duke Clinic

Location

Durham, NC

Highlights

- A leading cancer treatment and care facility in North Carolina

Problem

In 2001 Duke Clinic was having a terrible problem with 4 grease traps in the food court costing \$800 to pump every 3 weeks. Using ineffective liquid biological products, the lines were $\frac{3}{4}$ of the way clogged. As the clinic specially focuses on cancer treatment, odors were a particular concern.

Ecoflow Solution

In 2001 Duke Clinic installed 13 BIO-Amps™.

Result

After 13 months, the clogged pipes looked brand new, saving them over \$10,000 a year. The pumping of the grease traps in the food court has been dramatically improved, now pumping on average every 12 months. Odors are no longer a problem.
