

ECOFLOW SUCCESS AT

The Johns Hopkins Hospital

Location

Baltimore, Maryland

Highlights

- Ranked as the best overall hospital in America for 21 consecutive years
- Houses over 1000 beds, a staff of over 1,700 doctors and 30,000 employees
- Over 18 restaurants and coffee shops on the campus

Problem

In 2010 Johns Hopkins Hospital was having backups in their outpatient building due to the grills and restaurants located there. The lines were snaked every month and this was considered standard procedure. The costs associated with maintaining their drains at this one location cost them over \$10,000 a year.

Ecoflow Solution

In 2010 Johns Hopkins Hospital installed a BIO-Amp™ system in their outpatient facility with the hopes of eliminating the use of mechanical cleaning.

Result

Since the installation of the BIO-Amp, the hospital has eliminated the need for snaking every month which has saved over \$5000. Seeing the positive results at the outpatient center, Johns Hopkins Hospital has since installed 3 additional BIO-Amps and a DrainCobra in their newly expanded facilities.
