

ECOFLOW SUCCESS AT

Gaylord Potomac

GAYLORD
NATIONAL®
RESORT & CONVENTION CENTER
on the Potomac

Location

Washington, D.C.

Highlights

- 2,000 guest room and 110 suites
- 7 restaurants

Problem

The Gaylord Potomac was being charged twice the amount for a liquid biological from a competitor. Even utilizing the services from this competitor, the resort was still having odor issues in all kitchen areas. Their waste water was not in compliance and was being pressured by the Washington Suburban Sanitary Commission to make changes. The current service was simply inefficient.

Ecoflow Solution

Chemsearch FE suggested replacing the competitor's services with BIO-Amp™ technology.

Result

Since the installation of the BIO-Amp, the Gaylord has installed 17 units and has seen reduced grease buildup, reduced pumpouts and has not had any compliance issues with the Washington Suburban Sanitary Commission.
