

ECOFLOW SUCCESS AT

Texas Lutheran University

Location

Seguin, TX

Highlights

• 1,500 Students

Problem

Texas Lutheran had been routinely snaking and hydrojetting their Student Union Building drain lines as a preventative maintenance program. With this program in place, the Student Union still had backups and odor complaints.

Ecoflow Solution

Chemsearch FE installed a BIO-Amp™ in their main dining facility to eliminate the need for preventative maintenance and reduce their grease trap pump outs.

Result

Since the installation, they have not had to snake or hydro jet any of their lines that the BIO-Amp is treating. Also, they have reduced their grease trap pumping by 50%.

The University recently installed a DrainCobra™ to treat an ancillary drain line that was receiving a high amount of organic waste. Issues with this drain have been resolved since the install of the DrainCobra.
