

ECOFLOW SUCCESS AT

Texas Children's Hospital

Location

Houston, TX

Highlights

- Largest children's hospital in the United States
- 639 licensed beds (465 in operation)
- 3 kitchens, Chick-fil-A, Starbucks, Subway, and several other restaurants onsite

Problem

Texas Children's Hospital was having frequent backups, which led to routine maintenance for the engineering crew and outside contractors. The use of a competitor's liquid biological did not assist with the backups and associated odors. This was due to the high volume of waste being produced from the restaurants and coffee shops throughout the facility.

Ecoflow Solution

Texas Children's Hospital installed 3 BIO-Amp™ systems for their kitchens drain lines.

Result

Since the installation of the Bio-Amp systems, the building has not had any backups or odor issues associated with the treated lines. This resulted in a much more pleasant experience as expected at a world class facility.

When Texas Children's took on a \$1.5 billion expansion, they added 4 more BIO-Amp systems, giving them a total of 7 BIO-Amps.
